

ROSTERSOURCE

A SIMPLE SOLUTION FOR
DEMOGRAPHIC UPDATES

FREE AND OPEN PLATFORM AS A SERVICE (PAAS) MAKES PHYSICIAN ROSTER DATA EXCHANGE EASY

Keeping physician roster data updated can be a constant struggle for both physician practices and health plans. A new solution called RosterSource is designed to make updates easy for everyone—at no cost to physician offices.

RosterSource is the premier data platform for exchanging real-time physician demographics with insurance networks. Your institution continues to manage its physician data in its existing systems, and RosterSource pulls them in automatically.

HOW IT WORKS

You sync your data from electronic health records (EHRs), revenue cycle/practice management systems and other sources securely. You point us to your data, and we take care of the back-end infrastructure and data exchange.

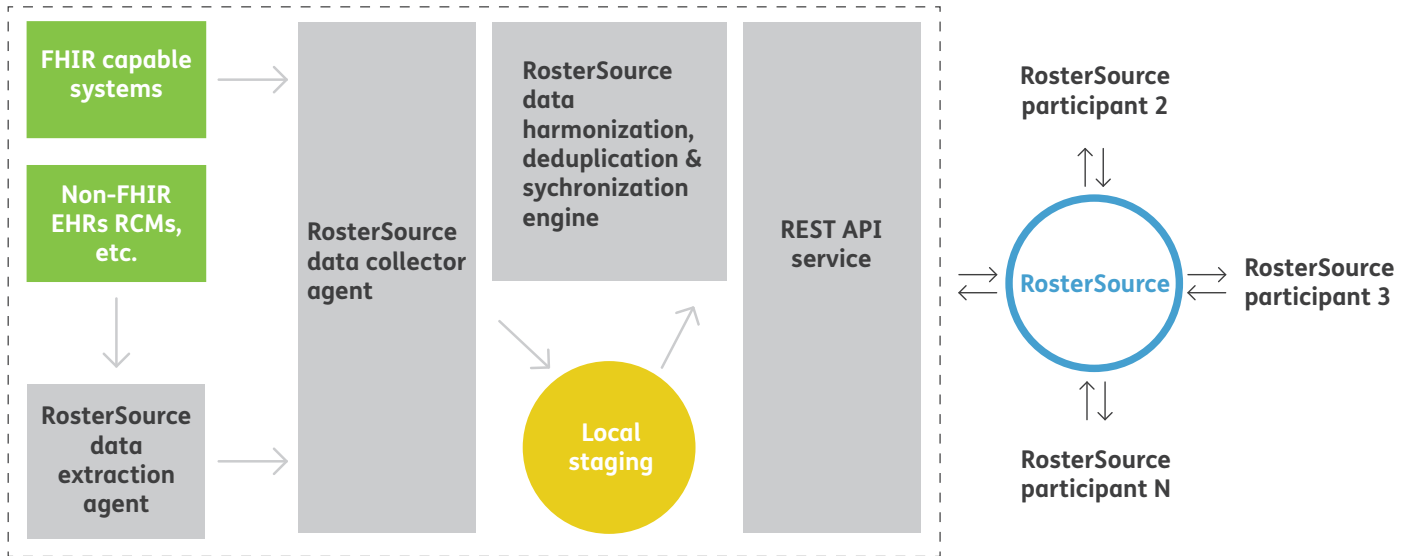

- RosterSource provides free connectivity software, infrastructure, authentication, authorization and data syncing.
- Your apps can use REST APIs or GraphQL queries to put data into or take data out of the RosterSource Data Network.

ROSTERSOURCE PARTICIPANT 1

(Health system, insurer, etc.)

BENEFITS FOR YOUR OFFICE

- You no longer have to send separate roster updates to multiple insurance companies because participating payers can access the updated data you send to RosterSource.
- No secondary work flow is needed. RosterSource works with your existing infrastructure—all you have to do is connect.
- There's no fee to use RosterSource.
- The RosterSource community manages the software—you have total control of the code in your environment.
- Security-related, compliance-focused and data-quality capabilities are built in to the open source solution.

SUMMARY

RosterSource creates a community of participants who work together in a single open-solution community so that secure physician roster data can be shared across institutions.

Our multi-institution (multi-tenant) platform as a service (PaaS) allows participants to share as much or as little data as needed, saving your practice time and money.
